- All ST 700 units are Experion tested to provide the highest level of compatibility assurance

## Configuration Tools

### External Two Button Configuration Option

Suitable for all electrical and environmental requirements, SmartLine offers the ability to configure the transmitter and display, for all basic parameters, via two externally accessible buttons when a display option is selected. Zero/span capabilities are also optionally available via two external buttons with or without selection of the display option.

### Internal Two Button Configuration Option

The Standard display has two buttons that can be used for Basic configuration such as re ranging, PV Engineering unit setting, Zero/Span settings, Loop testing and calibration functions.

### Handheld Configuration

SmartLine transmitters feature two-way communication and configuration capability between the operator and the transmitter. All Honeywell transmitters are designed and tested for compliance with the offered communication protocols and are designed to operate with any standards compliant handheld configuration device.

### Personal Computer Configuration

Field Device Manager (FDM) Software and FDM Express are also available for managing HART configurations.

## Modular Design

To help contain maintenance & inventory costs, all ST 700 transmitters are modular in design supporting the user's ability to replace meter bodies, standard displays or electronic modules without affecting overall performance. Each meter body is uniquely characterized to provide intolerance performance over a wide range of application variations in temperature and pressure.

### Modular Features

- Meter body replacement
- Add or remove standard displays
- Add or remove lightning protection (terminal connection)

With no performance effects, *Honeywell's unique modularity results in lower inventory needs and lower overall operating costs.*

## Other Certification Options

### SIL

<b>SIL 2/3 Certification</b>	IEC 61508 SIL 2 for non-redundant use and SIL 3 for redundant use according to EXIDA and TÜV Nord Sys Tec GmbH & Co. KG under the following standards: IEC61508-1: 2010; IEC 61508-2: 2010; IEC61508-3: 2010.

### Materials

- NACE MR0175, MR0103, ISO15156

## Application Data

### Liquid Level: Closed Tank

Determine the minimum and maximum pressure differentials to be measured (Figure 14)

$$\begin{aligned} P_{\text{Min}} &= (SG_p \times a) - (SG_f \times d) \\ &= \text{LRV when HP at bottom of tank} \\ &= \text{URV when LP at bottom of tank} \end{aligned}$$

$$\begin{aligned} P_{\text{Max}} &= (SG_p \times b) - (SG_f \times d) \\ &= \text{URV when HP at bottom of tank} \\ &= \text{LRV when LP at bottom of tank} \end{aligned}$$

Where:

minimum level at 4mA

maximum level at 20 mA

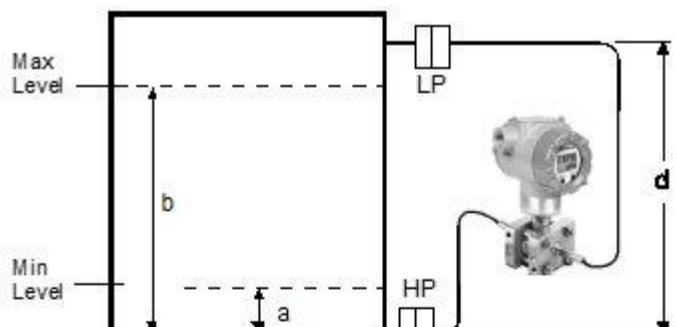

a = distance between bottom tap and minimum level

b = distance between bottom tap and maximum level

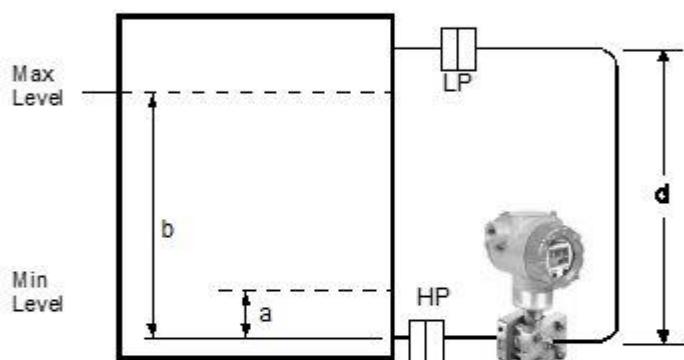

d = distance between taps

$SG_f$  = Specific Gravity of capillary fill fluid (See page 6 "Material Spec" for values.)

$SG_p$  = Specific Gravity of process fluid

### Application Data (Cont'd)

#### Density or Interface\*

Calculate the minimum and maximum pressure differentials to be measured. ([Figure 15](#))

$P_{min} = (SG_{min} - SG_f) \times (d)$ ;  
minimum density, 4mA output

$P_{max} = (SG_{max} - SG_f) \times (d)$ ;  
maximum density, 20mA output

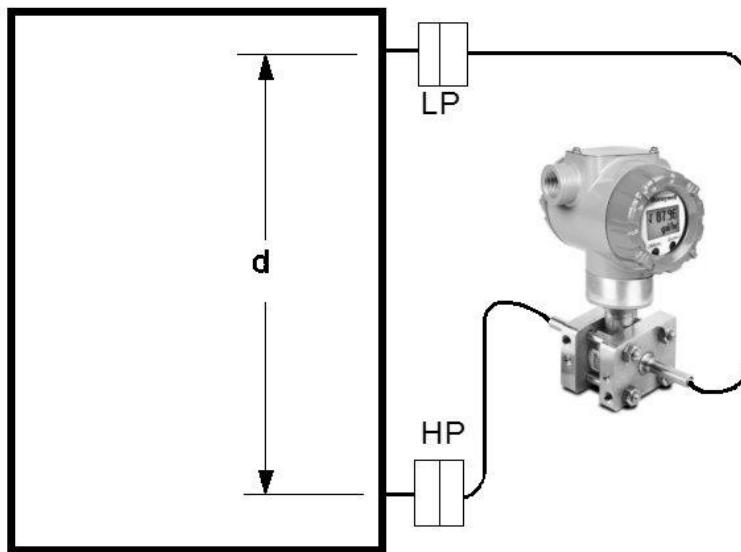

Where:

d = distance between the taps

$SG_{max}$  = maximum Specific Gravity

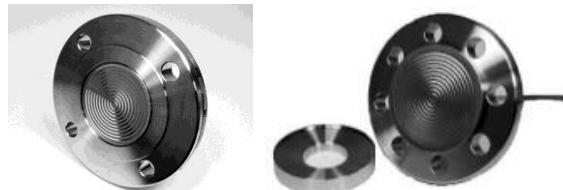

$SG_{min}$  = minimum Specific Gravity

$SG_f$  = Specific Gravity of capillary fill fluid (See page [6](#) "Material Specifications" for values.)

### Seal Configurations

**Figure 16—Flush Flange Seals and with Left Lower**

Flush Flange Seals can be used with differential, gauge and absolute pressure transmitters and are available with 3" ANSI Class 150, ANSI Class 300 and DIN DN80-PN40 process connections. Flush flange seals can also be provided with Lowers. Lowers are essentially calibration rings, which allow flushing connections if needed.

Pancake Seals can be used with differential, gauge and absolute pressure transmitters and are available with 3" ANSI Class 150, 300 and 600 process connections

**Seal Configurations (cont'd)****Figure 18 — Flange Seal with Extended Diaphragm**

Flange Seal with Extended Diaphragm can be used with differential, gauge and absolute pressure transmitters and are available with 3" and 4" ANSI Class 150, ANSI Class 300, DIN DN80-PN40 and DIN DN100-PN40 process connections. 2", 4" and 6" extension lengths are available

**Figure 19—Seals with Threaded Process Connections**

Seals with Threaded Process Connections can be used with differential, gauge and absolute pressure transmitters and are available with  $\frac{1}{2}$ ",  $\frac{3}{4}$ " and 1" NPT Female process connections.

**Figure 20 — Calibration Rings**

Calibration Rings are available with Flush Flange Seals and Pancake Seals. Flushing ports (1/4" or 1/2") are available with calibration rings.
