## Industrial induction flow meter in compact design without the display unit

The flow meter can be in full stainless design where the evaluation unit is located right on the flow meter sensor. The advantage: the possibility of using the meter in various technologies where the customer needs pulse or current signals from the meter for process management. Its applications can be found in all sorts of industries.

It can be selected from two types of meter, according to environmental classification. Application in standard environment and in potentially explosive atmospheres (EX design).

The flow meter is equipped with two information LEDs, indicating the state of the meter. Electrical connection is ensured through standard M12 connector, whereas in Ex design, by means of Amphenol C016 or Sealcon M23 connector.

● green	● yellow	Empty measuring tube	<4 mA
● red	–	Meter is out of order, servicing needed	<4 mA
● red	● yellow	Meter is temporarily out of parameters	<4 mA
–	–	Supply voltage error	–
